Notes to editors

Churchill Mining Plc listed on AIM in April 2005.

East Kutai Coal Project

In May 2007 Churchill announced a sales agreement had been entered into to purchase a 75% interest in the East Kutai Coal Project from PT Techno Coal Utama. Churchill has now extended the size of the project by 200 square kilometres by acquiring a 75% interest in the abutting tenements to the west of EKCP from the Investmine Group of Indonesia. Exploration and resource drilling continue along with scoping and pre-feasibility work.

EKCP has a JORC compliant resource of 1.4 billion tonnes, on only 20% of the coal target area drilled, substantially surpassing the amount of coal that was expected to be confirmed by the end of 2008.

Sendawar – CBM

The Sendawar CBM project in Kalimantan, Indonesia, covers more than 800 square kilometres of prospective ground and lies in close proximity to two operating open-cut coal mines. The project is located approximately 50km from the Mahakam River.

During Churchill's coal exploration programme, data collected during geophysical and resistivity work, along with data collected from previous oil and gas exploration in the area, indicated that the area was highly prospective for Coal Bed Methane. Churchill (70% of the CBM project) along with its Indonesian partner RMU (30%) were granted Indonesia's first CBM JEA license in September 2007. The CBM project has the potential to host Gas-in-Place of 5.6 trillion cubic feet. Churchill is currently conducting further studies on the CBM project before starting detailed field work.

South Woodie Woodie

Given the increased prospectivity of South Woodie Woodie and Churchill's increasing focus on its Indonesian coal and coal bed methane projects, the Company sold 80% of the project to Australian company Spitfire Resources Limited ("Spitfire").

Spitfire, which listed on the ASX on the 12th December 2007, has the option to purchase the remaining equity in the project but must spend AUD\$1.5 million on exploration. Aside from its large shareholding in Spitfire, Churchill also retains a price-indexed mining royalty over the South Woodie Woodie project.

The South Woodie Woodie project covers approximately 490 square kilometres (with a further 899 square kilometres under application) in the East Pilbara region of Western Australia, and sits approximately 400km southeast of Port Hedland in the highly prospective Pilbara manganese province. Spitfire has identified multiple drill targets and shall begin its new drill programme shortly.

In March 08 Spitfire announced that it had secured the strategic support of the diversified Norwegian-based industrial, trading and metals & alloys group, Tinfos AS ("Tinfos"), as its new major shareholder via a share placement.
